

CITROSA “CITRONELLA PLANT” – CARE INSTRUCTION

Citrosa Care Information:

Citrosa grows best in full or partial sun and well-drained soil. At least 4 hours of sun per day and temperatures between 55 to 70 ° F are ideal. Let the soil dry fully between watering. Citrosa requires little fertilizing.

Over-fertilizing can decrease their fragrance. Prune regularly to promote growth.

Citrosa are NOT frost tolerant.
